

How to Stay Healthy in the Monsoon Season the Ayurvedic Way

Dr. Balwant Singh

President Holistic Yog Foundation & Yog Expert, Thane

The monsoon season brings relief from the scorching summer heat, but it also comes with its own set of health challenges. According to Ayurveda, the ancient Indian system of medicine, the rainy season is the time when *Vata dosha* becomes aggravated and *Pitta dosha* starts accumulating. This imbalance in the body's elemental energies can make one prone to digestive disorders, skin infections, joint pain, and weakened immunity.

To maintain balance and prevent illness, Ayurveda prescribes specific lifestyle and dietary guidelines during the monsoon. Here's how you can stay healthy the Ayurvedic way:

1. Eat Light and Easily Digestible Foods: During the monsoon, digestive fire (*Agni*) becomes weak, making it difficult to digest heavy or oily foods. To keep your digestion strong:

- Opt for warm, cooked, and light meals such as khichdi, soups, steamed vegetables, and moong dal.
- Avoid raw salads, leafy greens, and fermented foods as they can cause indigestion.
- Use digestive spices like cumin, ginger, black pepper, turmeric, and ajwain to kindle *Agni*.
- Drink warm water or herbal teas (like ginger or cinnamon tea) instead of cold drinks.

2. Strengthen Immunity with Ayurvedic Herbs: Ayurveda recommends certain herbs to boost immunity and fight seasonal infections:

- Tulsi (Holy Basil): An effective adaptogen that enhances respiratory health.
- Giloy (Guduchi): Known for its immune-boosting and antipyretic properties.
- Turmeric: A natural antibiotic and anti-inflammatory agent.
- Ashwagandha: Supports stress reduction and strengthens the immune response.
- You can consume these in the form of teas, powders, or Ayurvedic formulations like *Chyawanprash*.

3. Avoid Cold, Stale, and Oily Foods: Cold and refrigerated foods weaken digestion and may cause mucus buildup. Avoid:

- Ice creams, cold drinks, and leftover meals.
- Excessively fried or oily snacks, which may cause bloating and acidity.
- Choose fresh, warm, and home-cooked meals to maintain gut health and energy levels.

4. Stay Dry and Maintain Personal Hygiene: Due to increased humidity, the monsoon season can lead to fungal infections and skin problems. To prevent this:

- Keep your body and feet dry, especially after getting wet in the rain.
- Wear loose, breathable cotton clothes.
- Apply neem or sandalwood-based powders to areas prone to sweating.
- Use Ayurvedic oils like *neem oil* or *coconut oil* infused with *camphor* for skin protection.

5. Practice Yoga and Gentle Exercise

- The rainy season can make one feel sluggish and lethargic. Gentle exercises like yoga can help balance *Vata* and stimulate metabolism.
- Focus on grounding postures like *Vrikshasana* (Tree Pose), *Tadasana*, and *Paschimottanasana*.
- Pranayama (breathing exercises) such as *Anulom Vilom*, *Bhramari*, and *Kapalabhati* help cleanse the respiratory system and calm the mind.

6. Daily Ayurvedic Rituals (Dinacharya): Incorporate these simple daily routines:

- Abhyanga (Oil Massage): Warm sesame oil massage before bathing balances *Vata*, nourishes the skin, and relieves joint stiffness.
- Nasya: Application of a few drops of medicated oil (like *Anu tailam*) in the nostrils helps prevent respiratory infections.
- Gargling: Use warm salt water or *triphala decoction* to prevent throat infections.

7. Sleep and Mental Health: Heavy clouds and less sunlight can affect mood and sleep. Follow a regular sleep schedule and avoid daytime napping to keep your biological clock in sync. Engage in light-hearted activities, meditation, or chanting to maintain emotional balance.

8. Use Natural Insect Repellents: The risk of mosquito-borne diseases increases during the monsoon. Use Ayurvedic mosquito repellents made from lemongrass, neem, and citronella. Keep your surroundings clean and dry to avoid mosquito breeding.

Ayurveda emphasizes aligning our lifestyle with nature's rhythms. By following seasonal routines and making mindful choices in food, hygiene, and daily practices, we can not only stay healthy during the monsoon but also enhance our vitality and immunity for the long term. Embrace this wisdom, and let the rains bring rejuvenation—not illness.
